

Joint Replacement and Reconstruction at ECMC

Life Moves, We Keep You Going

As we age, our joints deteriorate and can cause pain over time. The surgeons at UBMD Orthopaedics & Sports Medicine take a thorough, comprehensive approach to joint reconstruction and replacement for patients experiencing arthritic or wear-and-tear conditions, or traumatic accidents.

UBMD Orthopaedics & Sports Medicine offers the most advanced treatment options available to successfully help all patients regain high levels of mobility and strength, and reduce or eliminate pain.

The Best Option For You

While joint reconstruction and replacement procedures are advancing rapidly, our University-affiliated surgeons are ahead of the curve, making us the area's leading provider. Doctors in the community consistently refer to our surgeons for both routine and complex cases.

Our surgeons treat the most complicated joint replacement and reconstructive procedures, and have additional training in orthopaedic trauma -- making them the best-suited to handle your orthopaedic needs.

Our surgeons perform arthroplasty, the surgical procedure to rebuild or replace worn or weak joints with an artificial joint usually made of plastic, metal and/or ceramic.

Arthroplasty should be considered when your quality of life is impacted due to severe pain and stiffness, and a reduction in the activities you previously enjoyed.

We use state-of-the-art technology at ECMC, and provide private recovery rooms in the beautiful Russell J. Salvatore Orthopaedic Unit, and on-site physical therapy services.

Our Specialties

In order of frequency

- Hip replacement (anterior approach)
- Knee replacement
- Unicompartamental knee replacement
- Hip revisions
- Osteotomies around the hip and knee
- Treatment of hip fractures
- Extremity deformity correction with external frames

**Our joint replacement surgeons are the only surgeons in Western New York that are fellowship trained in orthopaedic trauma. As such, they treat the entire spectrum of fracture care, deformities, and nonunion or malunion fractures.*

Innovation & Outcomes

Each surgeon at UBMD Ortho is also a professor at the University at Buffalo, teaching the orthopaedic surgeons of the future and conducting innovative research. As a teaching hospital, ECMC is the home of UB's orthopaedic residency and fellowship programs.

Our ECMC joint replacement surgeons perform over 350 knee & hip joint procedures per year. **Over 93% of their patients would refer our services to friends and family.**

Are You a Candidate?

Joint reconstruction or replacement can help you return to a more active lifestyle. If you think you may benefit from surgery, consider the following:

- Is walking difficult and/or painful?
- Do you avoid activities that require standing or walking for a period of time?
- Do you have constant pain, aching and/or stiffness in your joints?

Did you answer yes? **Call 716.204.3200 to schedule an appointment with one of our experts.**
