

EXPERTISE IS EVERYTHING FOR Hip

We Are Leaders in Hip Care

Although you might associate hip pain and mobility issues as something that occurs with age, hip issues can happen at any age. Hip pain can be a result of issues with your muscles, ligaments, tendons, and other soft tissue surrounding the hip joint.

The hip joint is a ball-and-socket joint, the largest joint in the body and plays a big role in daily movement. However, both age and use can wear the cartilage down resulting in damage. You might feel hip pain in your thigh, buttocks, groin, or in the inside or outside of the hip joint.

If you're experiencing pain around your hip joint that gradually gets worse, results in persistent stiffness, or a decreased range of motion, UBMD Orthopaedics & Sports Medicine can help.

We'll handle your injury with care.

Our board-certified physicians will assess your hip injury and develop a treatment plan appropriate for your specific needs. Our doctors are also professors at the University at Buffalo, training orthopaedic surgeons and physicians of the future and conducting cutting-edge research that translates into new medical devices, treatment and care.

Trust the doctors who teach the doctors of tomorrow.
